

Protect Yourself from Email Fraud

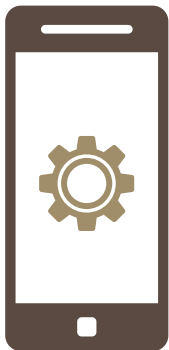

Windows Live™
Hotmail

How to Enable Hotmail 2-Step Verification

- Go to www.msn.com and click on "Sign In" in the upper right
- Once you are signed in to your MSN account, click on your account profile in the upper right and select "View Account"
- In the top navigation bar, select "Security & Privacy," then under "Account Security" click on "More Security Settings"
- If MSN already has your cell phone number or secondary email address, Select how you want to receive the security code (text, call, email) from the drop down window and provide the requested verification information onto the form. Click "Send code"

- You will receive a text, call or email with your security code

- On your device, you will be prompted to enter the code you just received. Type in the code, and then click "Submit"
- If you are using a device that you use frequently and feel it is secure, check the box indicating you do not want to be asked for a code in the future
- If you leave this box unchecked, a code will be required on that device each time you log in
- If you don't already have the mobile app for your Hotmail/Microsoft account, you will be asked if you would like to get it. You can choose "Set it up now" or "Set it up later" or "No thanks"
- Two-Step Verification has been set up
